## Temporary Water Treatment Change to End in Monmouth and Ocean Counties

**CAMDEN, NJ (March 27, 2019)** – On April 10, [New Jersey American Water](http://www.newjerseyamwater.com) will resume using chloramines in water treatment at its Swimming River Water Treatment Plant in Colts Neck and its Jumping Brook Water Treatment Plant in Neptune.

In early February, as part of an annual maintenance program for its water distribution system, New Jersey American Water temporarily changed the water treatment process from a chloramine (combination) residual to free chlorine residual. The seven-week changeover to free chlorine residual enabled the company to perform routine maintenance.

The treatment change applies to New Jersey American Water customers in the following communities: Aberdeen, Allenhurst, Asbury Park City, Avon, Bay Head, Belmar, Bradley Beach, Colts Neck Township, Deal, Eatontown, Elberon, Fair Haven, Hazlet, Highlands, Holmdel Township, Interlaken, Keansburg, Lake Como, Little Silver, Loch Arbor Village, Long Branch City, Matawan, Middletown Township, Monmouth Beach, Neptune City, Neptune Township (incl. Ocean Grove), Ocean Township, Oceanport, Red Bank, Rumson, Sea Bright, Shrewsbury, Shrewsbury Township, Tinton Falls, Union Beach, Wanamassa, and West Long Branch.

This treatment change also applies to residents living in the following communities that purchase water from New Jersey American Water: Aberdeen Township, Avon, Belmar, Lake Como, Matawan, Naval Weapons Station Earle, Keansburg and Point Pleasant.

During the transition to free chlorine residual, some customers may have noticed a slight chlorine taste and odor in their water. With the resumption of the chlorination process, the taste and smell of chlorine will subside. [Chloramines](http://www.newjerseyamwater.com) have long been effective method of water disinfection that meet all EPA and NJDEP drinking water standards, and have been used in Monmouth and Ocean counties since 2012.
